

The Journal of Neuroscience

August 23, 2006 • Volume 26 Number 34 www.jneurosci.org

Cover legend: Section of an embryonic day 11.5 mouse spinal cord illustrating a gradient of netrin protein (red immunofluorescence) in the path of commissural axons extending to the floor plate at the ventral midline (neurofilament M, green immunofluorescence). For more information, see the article by Kennedy et al. in this issue (pages 8866–8874).

- 8875 **Erratum:** In the article "Expression and Function of SNAP-25 as a Universal SNARE Component in GABAergic Neurons," by Lawrence C. R. Tafoya, Manuel Mamei, Teiko Miyashita, John F. Guzowski, C. Fernando Valenzuela, and Michael C. Wilson, which appeared on pages 7826–7838 of the July 26, 2006 issue, the calibration for the series of scale bars for electrophysiological studies presented in Panels A, B, D, and F of Figure 2 were inadvertently omitted during the preparation of this figure for submission. The corrected figure is reprinted in this issue. Also, on page 7829, the concentration of TTX should have read TTX (0.5 μ M), instead of TTX (0.5 mM).
