Cover legend: Immunofluorescent labeling of the planar cell polarity molecule Prickle-like 2 (PK2; green) in pairs of vestibular hair cells with opposite stereocilia bundle polarities from saccule (top row) and utricle (bottom row). Polarity is determined by the position of a void in α-spectrin labeling (red). Note that the subcellular distribution of Pk2 protein remains constant despite the opposite polarity of cells in either pair. For more information, see the article by Deans et al. in this issue (pages 3139–3147).

Erratum: In the article “Nicotinic Receptors Mediate Changes in Spinal Motoneuron Development and Axonal Pathfinding in Embryonic Zebrafish Exposed to Nicotine” by Kurt R. Svoboda, Sukumar Vijayaraghavan, and Robert L. Tanguay, which appeared on pages 10731–10741 of the December 15, 2002 issue, Figure 3A contained an error. The photograph in the top left panel was inadvertently duplicated in the bottom right panel. The correct version of Figure 3 is provided in this issue. The error was not reflected in the figure legend, and the original unchanged legend for Figure 3 is repeated in the erratum. This error does not, in any way, affect the conclusions of the paper.

Correction: The following should be added to the Figure 7 legend of the article "Role of Megakaryoblastic Acute Leukemia-1 in ERK 1/2-Dependent Stimulation of Serum Response Factor-Driven Transcription by BDNF or Increased Synaptic Activity" by Katarzyna Kalita, Giorgi Kharebava, Jing-Juan Zheng, and Michal Hetman, which appeared on pages 10020–10032 of the September 27, 2006 issue: The data presented in Figure 7 are from the same experiment in which we used the same input controls for SRF and MKL1 CHIPS. For clarity of presentation, SRF and MKL1 are presented separately. The input controls are duplicated in the right and left panels to make it easier for the reader to assess the specificity of the CHIP.
Persons interested in becoming members of the Society for Neuroscience should contact the Membership Department, Society for Neuroscience, 1121 14th St., NW, Suite 1010, Washington, DC 20005, phone 202-962-4000.

Instructions for Authors are available at http://www.jneurosci.org/misc/itoa.shtml. Authors should refer to these Instructions online for recent changes that are made periodically.

Brief Communications Instructions for Authors are available via Internet (http://www.jneurosci.org/misc/ifa_bc.shtml).

Submissions should be submitted online using the following url: http://sfn.manuscriptcentral.com. Please contact the Central Office, via phone, fax, or e-mail with any questions. Our contact information is as follows: phone, 202-962-4000; fax, 202-962-4945; e-mail, jn@sfn.org.
