August 1, 2007 • Volume 27 Number 31 www.jneurosci.org

**Cover legend:** Neuronal organization of gamma oscillations in space and time. Bistratified (yellow) and oriens-lacunosum moleculare (blue) interneurons, recorded and labeled in rat hippocampal area CA1 *in vivo*, have distinct firing patterns relative to gamma oscillations (purple waveform). The unexpectedly strong correlation of bistratified interneuron firing to gamma oscillations depicted here suggests a role for gamma oscillations in dendritic processing. Cover designed by Ben Tukur. For more information, see the article by Tukur et al. in this issue (pages 8184–8189).

**Correction:** In the article "Plant-Derived Flavanol (–)Epicatechin Enhances Angiogenesis and Retention of Spatial Memory in Mice" by Henriette van Praag, Melanie J. Lucero, Gene W. Yeo, Kimberly Stecker, Neema Heivand, Chunmei Zhao, Ed Yip, Mia Afanador, Hagen Schroeter, John Hammerstone, and Fred H. Gage, which appeared on pages 5869–5878 of the May 30, 2007 issue, there was a calibration error in the area measurements of the hippocampal subfields on page 5873, in Results, under Cellular effects of (–)epicatechin, (–)Epicatechin enhances angiogenesis. Please note that this calibration error does not affect the results of the study. The correct values are as follows: DG, including the molecular layer [controls,  $0.54 \pm 0.013 \text{ mm}^2$ ; (–)epicatechin,  $0.52 \pm 0.018 \text{ mm}^2$ ], area CA3 [controls,  $0.044 \pm 0.005 \text{ mm}^2$ ; (–)epicatechin,  $0.039 \pm 0.006 \text{ mm}^2$ ], and area CA1 [controls,  $0.22 \pm 0.013 \text{ mm}^2$ ; (–)epicatechin,  $0.26 \pm 0.024 \text{ mm}^2$ ]. The size of the areas measured did not differ between the groups for each hippocampal subfield ( $p > 0.05$ ).
