December 24, 2008 • Volume 28 Number 52 www.jneurosci.org

Cover legend: Multiphoton reconstruction of cortical microglia in a 3.5-month-old double-transgenic (PDAPP +/–; CX3CR1/GFP +/–) mouse, which developed amyloid plaques and expressed GFP specifically in microglia. Vessels were filled with Texas Red dextran. For more information, see the article by Koenigsnecht-Talboo et al. in this issue (pages 14156–14164).
