

The Journal of Neuroscience

January 7, 2009 • Volume 29 Number 1 www.jneurosci.org

Cover legend: Stick diagrams illustrating whole-body pointing movements to a target located on the ground in three experimental conditions: imposed straight finger trajectory, free finger trajectory, and imposed semicircular finger trajectory. One stick was plotted every 25 ms. Thick lines join successive time points for the finger (black) and center of mass trajectories (gray–green). For more information, see the article by Berret et al. in this issue (pages 191–205).
