April 29, 2009 • Volume 29 Number 17 • www.jneurosci.org

**Cover legend:** The translational repressor Pumilio controls eukaryotic initiation factor eIF-4E accumulation at larval neuromuscular junctions of *Drosophila*. eIF-4E aggregates (red), which are localized postsynaptically at neuromuscular junctions, are increased in *pumilio* mutants. The neuromuscular junctions are labeled with a presynaptic microtubule marker, anti-futsch (green). For more information, see the article by Menon et al. in this issue (pages 5558–5572).
