Cover legend: Simulated extracellular distribution of dopamine 5 ms after instantaneous release from 26 modeled dopamine terminals: The filled regions correspond to dopamine levels higher than 10 nM, and red regions correspond to dopamine levels exceeding 1000 nM. For more information, see the article by Dreyer et al. in this issue (pages 14273–14283).

14284 Correction: The article “Phase Misalignment between Suprachiasmatic Neuronal Oscillators Impairs Photic Behavioral Phase Shifts But Not Photic Induction of Gene Expression” by Michael D. Schwartz, Seth Congdon, and Horacio O. de la Iglesia originally appeared on pages 13150–13156 of the September 29, 2010 issue. A correction to that article appears on page 14284.

Correction: In the article “Neurodegeneration in a Transgenic Mouse Model of Multiple System Atrophy Is Associated with Altered Expression of Oligodendroglial-Derived Neurotrophic Factors” by Kiren Ubhi, Edward Rockenstein, Michael Mante, Chandra Inglis, Anthony Adame, Christina Patrick, Kristen Whitney, and Eliezer Masliah, which appeared on pages 6236–6246 of the May 5, 2010 issue, the authors regret that two authors (Sarah Michael and Brian Spencer) were omitted. Both authors are affiliated with the Department of Neurosciences, University of California, San Diego, School of Medicine, La Jolla, California 92093-0624. The author line should have appeared as follows: Kiren Ubhi, Edward Rockenstein, Sarah Michael, Brian Spencer, Michael Mante, Chandra Inglis, Anthony Adame, Christina Patrick, Kristen Whitney, and Eliezer Masliah.
