**Cover legend:** Calcium imaging in a living cerebellar Purkinje cell loaded with the calcium-sensitive dye Oregon Green BAPTA-2 in a mouse cerebellar slice. This picture shows in false colors the projection of the resting level of fluorescence acquired by a confocal laser microscope on multiple planes of the cell. Variations of calcium intensity can be detected in spines in response to climbing fiber stimulation. This calcium signaling is partly mediated by NMDA receptors in adult rodents and plays a key role in synaptic gain control. For more information, see the article by Piochon et al. in this issue (pages 15330–15335).

**Correction:** In the article "Differential Transport and Local Translation of Cytoskeletal, Injury-Response, and Neurodegeneration Protein mRNAs in Axons" by Dianna Willis, Ka Wan Li, Jun-Qi Zheng, Jay H. Chang, August Smit, Theresa Kelly, Tanuja T. Merianda, James Sylvester, Jan van Minnen, and Jeffery L. Twiss, which appeared on pages 778–791 of the January 26, 2005 issue, the authors regret that an initial was omitted from one of the authors' names (August Smit). The author line should have read as follows: Dianna Willis, Ka Wan Li, Jun-Qi Zheng, Jay H. Chang, August B. Smit, Theresa Kelly, Tanuja T. Merianda, James Sylvester, Jan van Minnen, and Jeffery L. Twiss.

**Correction:** In the article “Hierarchical and Serial Processing in the Spatial Auditory Cortical Pathway Is Degraded by Natural Aging” by Dina L. Juarez-Salinas, James R. Engle, Xochi O. Navarro, and Gregg H. Recanzone, which appeared on pages 14795–14804 of the November 3, 2010 issue, the authors regret that some of the cell numbers reported in Table 1 were wrong. For monkey L, 130 A1 neurons were analyzed, not 131. For monkey G, 149 A1 neurons were analyzed, not 114. These errors do not affect the results, interpretations, or conclusions.
