

The Journal of Neuroscience

July 13, 2011 • Volume 31 Number 28 • www.jneurosci.org

Cover legend: Frontal view of a 3-D model depicting cortical efferent fibers of the ventral prefrontal cortex in nonhuman primates. The model was derived by first charting individual fibers following tracer injections placed in the medial (red), central (yellow), and lateral (blue) ventral prefrontal cortex. A stack of 2-D coronal sections was used to create a 3-D rendering for each case separately, then merged into a reference model containing fibers from all three injection sites. Fibers travel both ipsilaterally and contralaterally, with those derived from medial cortical regions traveling ventral to those from more lateral regions (e.g., corpus callosum). For more information, see the article by Lehman et al. in this issue (pages 10392–10402).

Jeffrey L. Noebels, and Jeffrey L. Neul

Persons interested in becoming members of the Society for Neuroscience should contact the Membership Department, Society for Neuroscience, 1121 14th St., NW, Suite 1010, Washington, DC 20005, phone 202-962-4000.

Instructions for Authors are available at <http://www.jneurosci.org/misc/itoa.shtml>.
Authors should refer to these Instructions online for recent changes that are made periodically.

Brief Communications Instructions for Authors are available via Internet (http://www.jneurosci.org/misc/ifa_bc.shtml).

Submissions should be submitted online using the following url:
<http://jneurosci.msubmit.net>. Please contact the Central Office, via phone, fax,
or e-mail with any questions. Our contact information is as follows: phone,
202-962-4000; fax, 202-962-4945; e-mail, jn@sfn.org.
