Cover legend: Neural stem cells isolated from the subventricular zone of an adult C57BL/6 mouse. These cells form neurospheres in culture, and upon plating onto a matrix, they differentiate. The image shows neurosphere cells expressing β-III tubulin (red) and glial fibrillary acidic protein (green). Their nuclei are stained with 4′,6-diamidino-2-phenylindole (DAPI). For more information, see the article by Gadadhar et al. in this issue (pages 2615–2623).

This Week in The Journal

Journal Club
2349 Unwrapping the Ventral Stream
Jeremy Freeman and Corey M. Ziemba

Brief Communications
2488 Recurrent Processing in V1/V2 Contributes to Categorization of Natural Scenes
Mika Koivisto, Henry Raino, Antti Revonsuo, Simo Vanni, and Niina Salminen-Vaparanta

2563 Sleep Contributes to the Strengthening of Some Memories Over Others, Depending on Hippocampal Activity at Learning
Géraldine Rauchs, Dorothée Feyers, Brigitte Landeau, Christine Bastin, André Luxen, Pierre Maquet, and Fabienne Collette

2712 Dynamic Causal Modeling of Subcortical Connectivity of Language
Olivier David, Burkhard Maess, Korinna Eckstein, and Angela D. Friederici

Articles

Correction: In the article "A p38 Mitogen-Activated Protein Kinase-Dependent Mechanism of Disinhibition in Spinal Synaptic Transmission Induced by Tumor Necrosis Factor-α" by Haijun Zhang, Hui Nie, and Patrick M. Dougherty, which appeared on pages 12844–12855 of the September 22, 2010 issue, the authors regret that one of the authors’ names was misspelled. “Hui Nie” should have read “Hui Nie.”

Persons interested in becoming members of the Society for Neuroscience should contact the Membership Department, Society for Neuroscience, 1121 14th St., NW, Suite 1010, Washington, DC 20005, phone 202-962-4000.

Instructions for Authors are available at http://www.jneurosci.org/misc/itoa.shtml. Authors should refer to these Instructions online for recent changes that are made periodically.
