

The Journal of Neuroscience

May 2, 2012 • Volume 32 Number 18 • www.jneurosci.org

Cover legend: The lobula complex of a *Drosophila* optic lobe labeled with anti- α -tubulin (purple), which reveals an organization reminiscent of that in primary visual cortex. Palisades of small-field efferent columnar neurons (green) send axons to discrete glomerulus-like neuropil in the brain's lateral protocerebrum. Inputs to the glomeruli and the responses of local interneurons and subsequent relays are described. For more information, see the article by Mu et al. (pages 6061–6071).

6411 *Correction:* The article “Increased Excitability of Somatosensory Cortex in Aged Humans is Associated with Impaired Tactile Acuity” by Melanie Lenz, Martin Tegenthoff, Karsten Kohlhaas, Philipp Stude, Oliver Höffken, Mario A. Gatica Tossi, Tobias Kalisch, and Hubert R. Dinse appeared on pages 1811–1816 of the February 1, 2012 issue. A correction to that article appears on page 6411.
