

The Journal of Neuroscience

May 16, 2012 • Volume 32 Number 20 • www.jneurosci.org

Cover legend: The prairie vole (*Microtus ochrogaster*) is a socially monogamous rodent that is used for studying the neurobiology of social attachment. Prairie vole mates form selective and enduring pair bonds that are characterized by sharing a nest, home territory, and parental duties. Pair-bonded voles are aggressive toward novel conspecifics, and this selective aggression is regulated by κ -opioid receptors within the brain's motivational circuitry. For more information, see the article by Resendez et al. (pages 6771–6784).

7102 *Correction:* The article “A Role for the Eph Ligand Ephrin-A3 in Entorhino-Hippocampal Axon Targeting” by Eckart Stein, Nicolai E. Savaskan, Olaf Ninnemann, Robert Nitsch, Renping Zhou, and Thomas Skutella appeared on pages 8885–8893 of the October 15, 1999 issue. A correction to that article appears on page 7102.

Persons interested in becoming members of the Society for Neuroscience should contact the Membership Department, Society for Neuroscience, 1121 14th St., NW, Suite 1010, Washington, DC 20005, phone 202-962-4000.

Instructions for Authors are available at <http://www.jneurosci.org/misc/itoa.shtml>. Authors should refer to these Instructions online for recent changes that are made periodically.

Brief Communications Instructions for Authors are available via Internet (http://www.jneurosci.org/misc/ifa_bc.shtml).

Submissions should be submitted online using the following url: <http://jneurosci.msubmit.net>. Please contact the Central Office, via phone, fax, or e-mail with any questions. Our contact information is as follows: phone, 202-962-4000; fax, 202-962-4945; e-mail, jn@sfn.org.
