

The Journal of Neuroscience

September 19, 2012 • Volume 32 Number 38 • www.jneurosci.org

Cover legend: In the mouse cerebellum, posttetanic potentiation is mediated by calcium-sensitive protein kinase C (PKC) α and β . In PKC α/β double knockouts, antibodies against the only other calcium-sensitive isoform, PKC γ , label postsynaptic Purkinje cells exclusively, suggesting that no calcium-sensitive PKC is expressed in presynaptic granule cells. Nevertheless, granule cells compensate to maintain normal neuronal behavior. For more information, see the article by Fioravante et al. (pages 13004–13009).
