The high quality of Fine Science Tools surgical and microsurgical instruments is the result of our relentless attention to detail. Almost every instrument we sell is manufactured by skilled European craftsmen, designed to exacting specifications, made from the finest German stainless steel alloys, and tested to ensure precision performance and ergonomics.

Annual Review of Neuroscience
Volume 38 • August 2015 • neuro.annualreviews.org

Editor: Steven E. Hyman, Broad Institute of MIT and Harvard

The Annual Review of Neuroscience, in publication since 1978, covers the significant developments across the entire field of neuroscience, including molecular and cellular neuroscience, neurogenetics, development, plasticity and repair, systems neuroscience, cognitive neuroscience, behavior, and neurobiology of disease, with occasional reviews in history of neuroscience and ethics.

Access all Annual Reviews journals via your institution at www.annualreviews.org.

TABLE OF CONTENTS FOR VOLUME 38:

- Depression: A Decision-Theoretic Analysis, Quentin J.M. Huys, Nathaniel D. Daw, Peter Dayan
- Neuronal and Vascular Interactions, Benjamin J. Andreone, Baptiste Lacoste, Chenghua Gu
- The Genetics of Neuropsychiatric Diseases: Looking In and Beyond the Exome, Erin L. Heinzen, Benjamin M. Neale, Stephen F. Traynelis, Andrew S. Allen, David B. Goldstein
- Visual Guidance in Control of Grasping, Peter Janssen, Hansjörg Scherberger
- Neurodegenerative Diseases: Expanding the Prion Concept, Lary C. Walker, Mathias Jucker
- Neurological Aspects of Human Glycosylation Disorders, Hudson H. Freeze, Erik A. Eklund, Bobby G. Ng, Marc C. Patterson
- Glutamate Synapses in Human Cognitive Disorders, Lenora Volk, Shu-Ling Chiu, Kamal Sharma, Richard L. Huganir
- An Integrative Model of the Maturation of Cognitive Control, Beatriz Luna, Scott Marek, Bart Larsen, Brenden Tervo-Clemmens, Rajpreet Chahal
- Long-Range Neural Synchrony in Behavior, Alexander Z. Harris, Joshua A. Gordon
- Plasticity of Cortical Excitatory-Inhibitory Balance, Robert C. Froemke
- The Types of Retinal Ganglion Cells: Current Status and Implications for Neuronal Classification, Joshua R. Sanes, Richard H. Masland
- Global Order and Local Disorder in Brain Maps, Gideon Rothschild, Adi Mizrahi
- General Cortical and Special Prefrontal Connections: Principles from Structure to Function, Helen Barbas
- Chemosensory Receptor Specificity and Regulation, Ryan P. Dalton, Stavros Lomvardas
- Levels of Homology and the Problem of Neocortex, Jennifer Dugas-Ford, Clifton W. Ragsdale
- New Opportunities in Vasopressin and Oxytocin Research: A Perspective from the Amygdala, Ron Stoop, Chloé Hegoburu, Erwin van den Burg
- In Search of a Human Self-Regulation System, William M. Kelley, Dylan D. Wagner, Todd F. Heatherton
- Cell Types, Circuits, and Receptive Fields in the Mouse Visual Cortex, Cristopher Niell
- The Brain’s Default Mode Network, Marcus E. Raichle
Neuronline is SfN's members-only home for learning and discussion.

Don't wait to advance your career. Visit Neuronline today.

Become part of the world's largest organization of scientists and physicians devoted to understanding the brain and nervous system.

Join now and enjoy exclusive member benefits:

- Reduced fees and advanced registration for Neuroscience 2015
- Online subscription and reduced publication fees for The Journal of Neuroscience
- Abstract submission eligibility for the annual meeting
- Networking and scientific discussion on NeurOnLine
- Free online access to the European Journal of Neuroscience
- Premium career services through NeuroJobs
- And more!

QUAD™, the newest Sutter Instrument motorized micromanipulator, is easy-to-use and features four independent axes. Three axes provide the X, Y, Z-orthogonal motion typical of most motorized micromanipulators. In the QUAD, Sutter introduces a true fourth axis to move the electrode coaxially at exactly the desired angle of approach. The X, Y and Z axes have a 25 mm range of motion, and the fourth, diagonal axis, has 30mm of travel to significantly extend the reach of the system.

FEATURES
- Four independent axes – 30mm travel in diagonal for coaxial pipette movement, 25mm travel in X, Y and Z
- Sub-micron resolution
- True diagonal assures coaxial movement
- Suited for in vivo electrophysiological recording
- Quiet mode eliminates electrical noise
- User-friendly, fanless compact controller with ROE preserves bench space
- Push button control for multiple functions – Work, Home, Quiet, Pulse and Relative
- Robotic Home and Work position moves for easy automated pipette exchange

Automatic Membership Renewal
Now Available

Sign Up for Automatic Membership Renewal

- Save time — Lessen your to-do list
- Go green — Eliminate paper invoices and their impact on the environment
- Uninterrupted membership — Never miss an issue of The Journal of Neuroscience or any of your valuable member benefits
- Bonus Day — Ensure access to your choice of prime housing for the annual meeting before the opening of advance member registration
- Support the field — Know your dues enhance professional development initiatives, public outreach, advocacy, and more

Sign up today and you are entered for multiple chances to win a $250 Amazon® gift card!

California Institute of Technology  
Division of the Humanities and Social Sciences

Faculty Position in Cognitive Neuroscience

The Social Science faculty at the California Institute of Technology invites applications for a position in Cognitive Neuroscience at the assistant, associate or tenured professor level. Applicants should have a Ph.D. in neuroscience, psychology, economics, computer science or a related discipline. Applicants should have research interests in the neural basis of decision-making, learning or an area of cognitive neuroscience that informs decision neuroscience. Applicants should have extensive experience with human fMRI techniques. A working familiarity with computational methods (e.g., Bayesian modeling, reinforcement learning theory, game theory) is preferred but not required. The position is part of an interdisciplinary program that aims to understand the neurocomputational basis of human decision-making by combining methods and theories from multiple disciplines. We are seeking exceptionally qualified candidates who are committed to a career in research and teaching, and who are interested in collaborating with social scientists and neuroscientists as part of an innovative interdisciplinary program. The term of an initial untenured appointment is four years.

Interested candidates should apply electronically at: http://www.hss.caltech.edu/content/faculty-position-cognitive-neuro
Candidates unable to apply electronically should submit a current curriculum vitae, three letters of recommendation (candidates who are tenured professors should submit the names and contact information for four references in lieu of letters of recommendation), three representative papers or publications, and a synopsis of research and teaching goals to: Chair, Cognitive Neuro Search, HSS 228-77 Caltech, Pasadena, CA 91125.

The deadline for submitting applications is December 15, 2015. Application review will begin December 1, 2015.

Caltech is an EOEP of Minorities/Females/Protected Vets/Disability.

THE HISTORY OF NEUROSCIENCE IN AUTOBIOGRAPHY

The History of Neuroscience in Autobiography Series
Edited by Larry R. Squire
Outstanding neuroscientists tell the stories of their scientific work in this fascinating series of autobiographical essays. Within their writings, they discuss major events that shaped their discoveries and their influences, as well as people who inspired them and helped shape their careers as neuroscientists.

Autobiographical Video (Available in DVD Format)
PBS personality Richard Thomas interviews eminent senior neuroscientists who reflect upon their lives, their dreams, and their work, and share their insights on what's ahead in the field of neuroscience.
Researchers are discovering increasing interconnections between the worlds of immunology and neuroscience. Immune cells that cross the blood brain barrier are gaining just as much importance as the microglia and protein aggregation mechanisms housed within the central nervous system. With these newly emerging areas, scientists need dependable, high-quality reagents. Study both systems with BioLegend's comprehensive portfolio of immunology reagents and well-established former Covance neuroscience antibodies.

**Neuroscience Antibodies: Former Covance, Exclusive at BioLegend**

15,000+ antibodies and reagents for:

- Immunohistochemistry
- Immunofluorescent Microscopy
- Western Blotting
- Bioassays
- Recombinant Proteins
- Flow Cytometry
- ELISAs
- Multiplex Assays
- Cell Separation Kits
