THE JOURNAL OF NEUROSCIENCE

December 7, 2016 • Volume 36 Number 49 • www.jneurosci.org

Cover legend: This image shows the dendritic arbor of a *Drosophila* class-IV (C-IV) sensory neuron. The terminal branches of these dendrites are enriched in actin, and they are sensitive to mutations in the schizophrenia susceptibility gene *dysbindin* (*dysb*) and subunits of the Arp2/3 actin polymerization complex. Color code denotes section depth. For more information, see the article by Gokhale et al. (pages 12393–12411).
