- 4531 Poggio, G.F., F. Gonzalez, and F. Krause: Stereoscopic Mechanisms in Monkey Visual Cortex: Binocular Correlation and Disparity Selectivity
- 4551 Magnusson, K.R., J.E. Madl, J.R. Clements, J.-Y. Wu, A.A. Larson, and A.J. Beitz: Colocalization of Taurine- and Cysteine Sulfinic Acid Decarboxylase-like Immunoreactivity in the Cerebellum of the Rat with Monoclonal Antibodies Against Taurine
- 4565 Uhlich, D.J., J.B. Cucchiaro, and S.M. Sherman: The Projection of Individual Axons from the Parabrachial Region of the Brain Stem to the Dorsal Lateral Geniculate Nucleus in the Cat

**Cover picture:** Zebrafish embryos are freed from their egg case at the 34th hr postfertilization. The eyes are already well developed, and the first ganglion cell axons leave the eye at this age. The ganglion cells and their growing axons can be stained by intraretinal applications of small crystals of the fluorescent dyes diI and diO, which allows the visualization of their axons on their path towards their retinotopic target sites in the tectum. Photograph by R. Gromeke-Lutz and B. Sailer from the paper by C. A. O. Stuermer (pp. 4513–4530, this issue).

### Erratum

“A desensitized form of neuronal acetylcholine receptor detected by <sup>3</sup>H-nicotine binding on bovine adrenal chromaffin cells” by Linda S. Higgins and D.K. Berg, *Journal of Neuroscience* 8(4): 1436–1446.

The third sentence of the introduction should read, “Unlike AChRs from muscle and electric organ, however, the receptors on bovine adrenal chromaffin cells are not blocked by  $\alpha$ -bungarotoxin ( $\alpha$ -Bgt) (Trifaro and Lee, 1980; Kilpatrick et al., 1981; Higgins and Berg, 1987a); they are blocked instead by neuronobungarotoxin (n-Bgt) (Higgins and Berg, 1987a), previously referred to as bungarotoxin 3.1, toxin F, or kappa-bungarotoxin (Loring and Zigmond, 1988).”

Instructions to Authors appear in the January issue only. Copies of the Instructions can be obtained by writing the Society for Neuroscience, 11 Dupont Circle, N.W., Suite 500, Washington, DC 20036.

---

*The Journal of Neuroscience* (ISSN 0270-6474) is the official journal of the Society for Neuroscience. It is published monthly for the Society, one volume a year, by Oxford University Press, 200 Madison Avenue, New York, NY 10016.

*Subscriptions* are on a per-volume basis beginning with the January issue. The volume 8 (1988) rates for the U.S. are \$165 for individuals and \$385 for institutions. Outside the U.S. add \$40; for air-expedited delivery add an additional \$55. Single copies are \$35. Student subscription rates are available only through the Society for Neuroscience. Institutional (multiple-reader) rates apply to libraries, schools, hospitals, clinics, group practices, and federal, commercial, and private institutions and organizations. Address subscription and back issue requests to the Journals Department, Oxford University Press, 16-00 Pollitt Drive, Fair Lawn, NJ 07410.

*Change of Address* notifications must be sent to Oxford's Journals Department at least 60 days in advance. Journals undeliverable because of incorrect addresses will be destroyed. Duplicates can be obtained (if available) from Oxford at the regular price of single issues.

*Advertising* inquiries should be addressed to Donald Pfarr, Williams & Wilkins, 428 E. Preston Street, Baltimore, MD 21202, telephone 301-528-4000.

*Microfilm* inquiries should be directed to the Journals Department, Oxford University Press, 16-00 Pollitt Drive, Fair Lawn, NJ 07410.

*Reprints* of individual articles are available only from the authors.

*Japanese yen price* is available from our sole agent: Kinokuniya Publications Co., Ltd., Journals Department, P.O. Box 55 Chitose, Tokyo 156, Japan.

*Postmaster*: Second class postage paid at Washington, DC, and at additional mailing offices; send address changes to the Journals Department, Oxford University Press, 16-00 Pollitt Drive, Fair Lawn, NJ 07410.

*The Journal of Neuroscience* is indexed by *Current Contents* and *Index Medicus*.
