Supplementary Figure 5. Increased OB mass is not due to local OB neurogenesis.
A single injection of BrdU (200 mg/kg) was administered 2 hours before tissue harvest. Representative sections of GCL of OB were stained with BrdU and showed no difference in labeling between control and mutant. GCL, granule cell layer; OB, olfactory bulb; BrdU, 5-Bromo-2'-Deoxyuridine; DAPI is used as counterstain to visualize nuclei.
