**Cover picture:** Quick-freeze, deep-etch, electron microscopy of the cultured bovine chromaffin cell. Fresh sample on a collagen gel was frozen without any treatment. The cytoplasm is filled with numerous chromaffin granules. Plasma membrane is shown on the top, with which chromaffin granules may fuse during secretion after stimulation. A large organelle at the bottom is nucleus with nuclear pores. See Nakata and Hirokawa, pp. 2186–2197.
