Cover picture: A pseudocolor confocal image of two rat cortical pyramidal neurons immunofluorescently labeled with an antibody against the DRK1 K⁺ channel. The image details selective subcellular localization/targeting of K⁺ channels to intracellular processing centers and/or to synaptic boutons, as described in Hwang et al. (pp. 1569–1576). The white/red areas indicate high K⁺ channel density, while the yellow/green/blue areas indicate lower channel density.

Erratum: In the process of printing the article “Sound-Localization Deficits Induced by Lesions in the Barn Owl’s Auditory Space Map,” by Hermann Wagner [*J Neurosci* 13: 371–386 (1993)] the scale bar belonging to the photographs of Fig. 4 (p. 376) was lost. The scale bar belonging to Fig. 3 (p. 375) is valid for Figure 4, *b*, *d*, *f*, and *h*, as well. The publisher regrets the error.
