**Cover picture:** Magnetic resonance images of the brain of patient SM-046, who has selective and bilateral damage to the amygdala (lesion shown in *red*). Sections at the level of the amygdala are shown in coronal (*top*) and horizontal (*bottom*) planes. The bilateral amygdala lesion resulted in a specific impairment of SM-046 to recognize fear in facial expressions. See Adolphs et al., pp. 5879–5891.
