The Journal of Neuroscience

October 1, 2003 • Volume 23 Number 26 www.jneurosci.org

Cover picture: PS2APP mice develop an age-related cognitive deficit, the histopathological correlate of which is a severe cerebral amyloidosis. A Congo red-stained amyloid plaque in a hemalum-counterstained section of the frontolateral cortex of a 17-month-old transgenic mouse is shown (bright-field optics; 1108× magnification). For details, see the article by Richards et al. in this issue (pages 8989 –9003).
