

The Journal of Neuroscience

January 12, 2005 • Volume 25 Number 2 www.jneurosci.org

Cover picture: Confocal micrograph of the third cardiac chamber showing localization of postsynaptic glutamate IIA receptors (GluRIIA) at cardiac synapses in adult *Drosophila melanogaster*. Green fluorescent protein (GFP)-immunoreactive (IR) transverse nerves and cardiac terminals are shown in red. GluRII-IR clusters (green) are visible along both main neuronal branches and cardiac terminals. Regions of colocalization are visualized in yellow. Pericardial cells with green fluorescent nuclei are also visible surrounding the chamber. For details, see the article by Dulcis and Levine in this issue (pages 271–280).

Correction: In the article “Transcranial Direct Current Stimulation during Sleep Improves Declarative Memory,” by Lisa Marshall, Matthias Mölle, Manfred Hallschmid, and Jan Born, which appeared on pages 9985–9992 of the November 3, 2004 issue, an incorrect stimulation parameter was inadvertently given in the third sentence of the abstract and in the second sentence of the fourth paragraph of Materials and Methods. In those two sentences, current strength (0.26 mA) is meant, rather than current density (0.26 mA/cm²).
