

The Journal of Neuroscience

August 10, 2005 • Volume 25 Number 32 www.jneurosci.org

Cover picture: Growth cone of embryonic rat hippocampal neurons in culture stained for the synaptic vesicle markers SV2 (green) and F-actin (red). Synaptic vesicles are clustered in the central domain but are excluded from the distal region underlain by F-actin. The image shows a three-dimensional representation of the fluorescence intensities (z-axis). For details, see the article by Bonanomi et al. in this issue (pages 7299–7308).

- Correction:** In the article “Science Education: A Neuroscientist’s View of Translational Medicine,” by Rochelle Schwartz-Bloom, which appeared on pages 5667–5669 of the June 15, 2005 issue, the URL listed in the first column of page 5669 is incorrect. The correct URL is www.thepepproject.net.

Erratum: In the article “Migration of Perilesional Microglia after Focal Brain Injury and Modulation by CC Chemokine Receptor 5: An *In Situ* Time-Lapse Confocal Imaging Study,” by W. Shawn Carbonell, Shin-Ichi Murase, Alan F. Horwitz, and James W. Mandell, which appeared on pages 7040–7047 of the July 27, 2005 issue, the supplemental material is cited incorrectly because of a printer’s error. Supplementary movie data (movies 1–14) and a supplemental table are available at <http://www.bigaxon.com/jneurosci/>.
