October 5, 2005 • Volume 25 Number 40 www.jneurosci.org

Cover picture: Rendering of a computational model of the medium spiny projection neurons of the nucleus accumbens during and after action potential generation. Each colored cell represents a different phase of the action potential, and the membrane potential in each compartment is represented in pseudocolor. The voltage peak of the action potential (in red, bottom cell) is backpropagated through the dendrites (red compartments of top cell). See the article by Wolf et al. for details (pages 9080–9095).

9317 **Correction:** In the article "Unilateral Storage of Fear Memories by the Amygdala," by Hugh T. Blair, Virginia K. Huynh, Vanessa T. Vaz, John Van, Reekesh R. Patel, Amit K. Hiteshi, Jennie E. Lee, and Jason W. Tarple, which appeared on pages 4198–4205 of the April 20, 2005 issue, there were two errors in Figure 2. First, in the bar graph of Figure 2D, the bars for the CONTRA and BI groups were swapped and therefore appeared inconsistent with the data in Figure 2, B and C. (The authors would like to thank an astute reader, Shreejith Pillai, for bringing this error to their attention). Second, in the bar graph of Figure 2C, the bars for the CONTRA group were slightly inaccurate because an outdated data file was imported into the graphing software and the final two rats of the CONTRA group were not included in the plotted means. These errors affected only the graphs and not the data analysis. The authors have reconfirmed all of the statistics reported in the paper and verified that they are correct. A corrected version of Figure 2, C and D, as well as the legend, is printed in this issue.

Correction: In the article "Interaction via a Key Tryptophan in the I-II Linker of N-type Calcium Channels Is Required for β 1 But Not for Palmitoylated β 2, Implicating an Additional Binding Site in the Regulation of Channel Voltage-Dependent Properties," which appeared on pages 6984–6996 of the July 27, 2005 issue, the middle initial listed for the second author is incorrect. The second author's name should have read Mark W. Richards.
