

The Journal of Neuroscience

November 15, 2006 • Volume 26 Number 46 www.jneurosci.org

Cover legend: Three-dimensional reconstructions of part of the left cerebellum (lobules V, simple lobule and crus 1) of the rat showing precise matching of mossy fiber terminals (green) and climbing fiber terminals (red) both labeled from an injection into the paramedian lobule. Mossy fibers in addition terminate in nonadjacent band-like patterns. Yellow contour: cerebellar surface, cyan: Purkinje cell layer, blue: white matter. For more information see the article by Pijpers et al. in this issue (pages 12067–12080).
