

The Journal of Neuroscience

April 4, 2007 • Volume 27 Number 14 www.jneurosci.org

Cover legend: Immunofluorescence labeling of the cerebellar cortex of adult *Plexin-B2*-deficient mice with antibodies against parvalbumin (red) and calbindin (green). In the mutant, the layering of the cerebellar cortex is disorganized and ectopic islands of Purkinje cells (yellow) are embedded in the granule cell layer (labeled in blue using Hoechst staining). However, molecular layer interneurons (red) are still found near Purkinje cell dendrites. For more information, see the article by Friedel et al. in this issue (pages 3921–3932).

3933 *Erratum:* In the article “Perceptual Functions of Perirhinal Cortex in Rats: Zero-Delay Object Recognition and Simultaneous Oddity Discriminations,” by Susan J. Bartko, Boyer D. Winters, Rosemary A. Cowell, Lisa M. Saksida, and Timothy J. Bussey, which appeared on pages 2548–2559 of the March 7, 2007 issue, Figure 6 was a duplicate of Figure 3. The correct Figure 6 is printed in this issue.
