

**Corrections:** In the article “Missorting of Tau in Neurons Causes Degeneration of Synapses That Can Be Rescued by the Kinase MARK2/Par-1” by Edda Thies and Eva-Maria Mandelkow, which appeared on pages 2896–2907 of the March 14, 2007 issue, the term Par-1 was incorrectly defined as “protease-activated receptor 1,” when in fact it is an established term and should have been retained without an explanation.

In the article “Trade-Off between Object Selectivity and Tolerance in Monkey Inferotemporal Cortex” by Davide Zoccolan, Minjoon Kouh, Tomaso Poggio, and James J. DiCarlo, which appeared on pages 12292–12307 of the November 7, 2007 issue, in describing the finding of a trade-off between clutter tolerance and selectivity in the simulations shown in Fig. 9, *D* and *E* and discussed on page 12303, a reference was omitted to a previous modeling study [Riesenhuber and Poggio, 1999 (*Neuron* 24:111–1125)] that implicitly predicted the existence of such a trade-off (see their Figs. 3 and 5*b*) using an earlier version of the recognition model described in our study. We thank M. Riesenhuber for noting the oversight.
