

The Journal of Neuroscience

May 27, 2009 • Volume 29 Number 21 • www.jneurosci.org

Cover legend: Cultured rat dopaminergic neurons labeled with the fluorescent cocaine analog JHC 1-64, which specifically binds the dopamine transporter. The labeling and imaging were performed with live dopaminergic neurons and show an extensive and uniform distribution of the transporter in the cells. For more information, see the article by Eriksen et al. in this issue (pages 6794–6808).

Retraction: *The Journal of Neuroscience* has received a report describing an investigation by the Shanghai Institute of Biological Sciences, Chinese Academy of Sciences, which found major data misrepresentation in the article “*Lmx1b*-Controlled Isthmic Organizer Is Essential for Development of Midbrain Dopaminergic Neurons” by Chao Guo, Hai-Yan Qiu, Ming Shi, Ying Huang, Randy L. Johnson, Marcelo Rubinstein, Sheng-Di Chen, and Yu-Qiang Ding, which appeared on pages 14097–14106 of the December 24, 2008 issue. Because the results cannot be considered reliable, the *Journal* is retracting the paper.
