

The Journal of Neuroscience

January 21, 2009 • Volume 29 Number 3 www.jneurosci.org

Cover legend: An artistically stylized view of a mutant *Drosophila* visual system. When the transcription factor Runt is mis-expressed in the developing visual system, seen here at 40% pupal development, many photoreceptor axons (green) bypass the lamina and terminate in the medulla. The pupal brain was immunohistochemically labeled for the neuronal nuclei (anti-ELAV, magenta), photoreceptor axons (anti-Chaoptin, green) and glial nuclei (anti-Repo, blue). For more information, see the article by Edwards et al. in this issue (pages 828–841).

Corrections: In the article “Overexpressed Transient Receptor Potential Vanilloid 3 Ion Channels in Skin Keratinocytes Modulate Pain Sensitivity via Prostaglandin E₂” by Susan M. Huang, Hyosang Lee, Man-Kyo Chung, Una Park, Yin Yin Yu, Heather B. Bradshaw, Pierre A. Coulombe, J. Michael Walker, and Michael J. Caterina, which appeared on pages 13727–13737 of the December 17, 2008 issue, the TRPV1 antagonist used in the study was typographically misidentified as JNJ-7203212. The correct name of this compound is JNJ-17203212.

In the article “NMDA- and β -Amyloid₁₋₄₂-Induced Neurotoxicity Is Attenuated in Serine Racemase Knock-Out Mice” by Ran Inoue, Kenji Hashimoto, Tomomi Harai and Hisashi Mori, which appeared on pages 14486–14491 of the December 31, 2008 issue, there were errors of molecular weight of size markers in Figure 2. The molecular weight of size markers for SR should be 35.5 to 47 KDa instead of 29.5 to 35.9 KDa.
