

The Journal of Neuroscience

September 2, 2009 • Volume 29 Number 35 • www.jneurosci.org

Cover legend: Three-dimensional model of the brain showing regions of increased volume in the insula, cerebellar vermis, and substantia nigra in individuals with genetic predisposition for bipolar disorder. The image has been reformatted in a style inspired by Vincent van Gogh, the most famous painter with bipolar disorder. For more information, see the article by Kempton et al. in this issue (see pages 10863–10868).
