

The Journal of Neuroscience

September 30, 2009 • Volume 29 Number 39 • www.jneurosci.org

Cover legend: Nectin-3 immunocytochemistry reveals the axons of neocortical callosal projection neurons (CPN; white) as they course through the corpus callosum early in development. In this issue, Molyneux et al. report on the identification of a series of genes that individually and in combination define CPN and novel CPN subpopulations during embryonic and postnatal development. For more information, see the article by Molyneux et al. in this issue (pages 12343–12354).
