Cover legend: Pseudocolored maximal projection overlay of several confocal images of cultured mouse hippocampal neurons fluorescently labeled with antibodies against microtubule-associated protein (MAP2) (green) and against synapsins (yellow). These cultures have been used to uncover progressive degeneration of GABAergic synapses in knock-out mice lacking cysteine string protein- α . For more information, see the article by García-Junco-Clemente et al. in this issue (pages 7377–7391).

- 7447 **Correction:** In the articles “Central and Medial Amygdaloid Brain-Derived Neurotrophic Factor Signaling Plays a Critical Role in Alcohol-Drinking and Anxiety-Like Behaviors” by Subhash C. Pandey, Huaibo Zhang, Adip Roy, and Kaushik Misra, which appeared on pages 8320–8331 of the August 9, 2006 issue, and “Effector Immediate-Early Gene Arc in the Amygdala Plays a Critical Role in Alcoholism” by Subhash C. Pandey, Huaibo Zhang, Rajesh Ugale, Anand Prakash, Tiejun Xu, and Kaushik Misra, which appeared on pages 2589–2600 of the March 5, 2008 issue, errors were made in figures. In Figure 5A of Pandey et al. (2006), the same photomicrograph was presented to document the placement of cannulae in aCSF- and BDNF antisense-treated subjects. In Figure 5B of Pandey et al. (2008), offset versions of the same photomicrograph were presented to document pCREB immunolabeling for the C+aCSF and C+BDNF treatments. In Figure 6B of

Pandey et al. (2008), the same photomicrograph was presented to document Arc mRNA-positive cells in aCSF and Arc sense (12 h postinfusion) treatments. Corrected versions of these panels are printed in this issue. The authors regret these oversights.
