July 21, 2010 • Volume 30 Number 29 • www.jneurosci.org

**Cover legend:** A scanning electron micrograph of a surface preparation of wild-type (C57BL/6) mouse cochlea. Prominent are hair bundles of the three rows of outer hair cells (V-shaped structures). The actin-crosslinking protein fascin-2 is necessary for the continued presence of cochlear hair bundles, which are essential for hearing. Micrograph by Kateri Spinelli. See the article by Shin et al. in this issue (pages 9683–9694).

**9954** **Correction:** The article “Neuronal Transporters Regulate Glutamate Clearance, NMDA Receptor Activation, and Synaptic Plasticity in the Hippocampus” by Annalisa Scimemi, Hua Tian, and Jeffrey S. Diamond, originally appeared on pages 14581–14595 of the November 18, 2009 issue. A correction to that article appears on pages 9954–9956.
