Cover legend: A ring of neuronal cell bodies with dendrites oriented toward the cell-free center. Such aggregates are formed in the developing mouse cerebral cortex when Reelin is expressed ectopically via *in utero* electroporation. Magenta cells express Reelin and green fluorescent protein. Nuclei (gray) were labeled with propidium iodide. For more information, see the article by Kubo et al. in this issue (pages 10953–10966).
