

The Journal of Neuroscience

February 10, 2010 • Volume 30 Number 6 • www.jneurosci.org

Cover legend: Re-colored and stylized light micrograph of the ventral aspect of a segmental ganglion of the medicinal leech. Individual neuronal somata are visible. Each segmental ganglion of the leech CNS contains a complete neural oscillator for crawling. For a discussion of the mechanism for coordination of the segmental crawl oscillators, see the paper by Puhl and Mesce in this issue (pages 2373-2383).

Correction: In the article “Pedunculo pontine Tegmental Nucleus Controls Conditioned Responses of Midbrain Dopamine Neurons in Behaving Rats” by Wei-Xing Pan and Brian I. Hyland, which appeared on pages 4725–4732 of the May 11, 2005 issue, the following acknowledgment was mistakenly omitted: “Preliminary experiments for this study were performed by Karina Karolina Kedzior in partial fulfillment of her Postgraduate Diploma in Science degree at the University of Otago, awarded in 1999.”
