

The Journal of Neuroscience

June 22, 2011 • Volume 31 Number 25 • www.jneurosci.org

Cover legend: Sequential *in utero* labeling of earlier-born projection neurons electroporated at embryonic day 14.5 (E14.5) (green) and later-born neurons electroporated at E15.5 (red) in developing mouse neocortex. Dab1, a downstream effector of Reelin, was knocked down in the later-born neurons, and the image was obtained at postnatal day 7. Reelin (cyan) is an essential regulator of the “inside-out” development of the neocortex. Knockdown of Dab1 caused terminal translocation failure of later-born neurons, thus disrupting the inside-out pattern. Magenta is nuclear staining. For more information, see the article by Sekine et al. in this issue (pages 9426–9439).

9440 **Correction:** The article “Impaired GABA and Glycine Transmission Triggers Cardinal Features of Rapid Eye Movement Sleep Behavior Disorder in Mice,” by Patricia L. Brooks and John H. Peever, originally appeared on pages 7111–7121 of the May 11, 2011 issue. A correction to that article appears on page 9440.

Correction: The article “Reverse Signaling by Glycosylphosphatidylinositol-Linked *Manduca* Ephrin Requires a Src Family Kinase to Restrict Neuronal Migration *In Vivo*,” by Thomas M. Coate, Tracy L. Swanson, and Philip F. Copenhagen, originally appeared on pages 3404–3418 of the March 18, 2009 issue. A correction to that article appears on page 9440.

9441 **Retraction:** *The Journal of Neuroscience* has received the results of an investigation conducted by Nanjing Medical University, which identified misrepresentation of data in the article “Synaptic Metaplasticity through NMDA Receptor Lateral Diffusion” by Jiang Zhao, Yi Peng, Zhuo Xu, Rong-qing Chen, Qin-hua Gu, Zheng Chen, and Wei Lu, which appeared on pages 3060–3070 of the March 19, 2008 issue. Because the results are not reliable, *The Journal* is retracting the paper.
