Cover legend: Average map of myelin content across the human cortical surface shown in a lateral inflated view. Red/orange indicates high myelin content; black/purple indicates low myelin content. Myelin content was measured noninvasively using the ratio of T1-weighted/T2-weighted magnetic resonance images. Myelin maps allow identification of human cortical areas *in vivo*. For more information, see the article by Glasser and Van Essen in this issue (pages 11597–11616).
