

The Journal of Neuroscience

November 16, 2011 • Volume 31 Number 46 • www.jneurosci.org

Cover legend: A scanning electron micrograph of the surface of the amphibian papilla showing hair cells (yellow) in the sensory epithelium. The diffusion barriers created by the synaptic ribbon and its vesicles may play a key role in synchronizing vesicle release. For more information, see the article by Graydon et al. in this issue (pages 16637–16650).
