

The Journal of Neuroscience

March 2, 2011 • Volume 31 Number 9 • www.jneurosci.org

Cover legend: Brain of a *Drosophila* maggot. The synapse-associated protein of 47 kDa (white) is found in the neuropil regions of the brain hemispheres (top), and throughout the ventral nerve cord. Phalloidin (orange) is used to visualize F-actin. For more information, see the article by Saumweber et al. in this issue (pages 3508–3518).

Correction: In the article “Muscarinic Signaling in the Cochlea: Presynaptic and Postsynaptic Effects on Efferent Feedback and Afferent Excitability” by Stéphane F. Maison, Xiao-Ping Liu, Douglas E. Vetter, Ruth Anne Eatock, Neil M. Nathanson, Jürgen Wess, and M. Charles Liberman, which appeared on pages 6751–6762 of the May 12, 2010 issue, the authors regret that they neglected to acknowledge the contribution of an associate, Ben Winterroth, to a method used in the paper. The following sentence should have been added to the acknowledgments: “We thank Ben Winterroth for setting up the protocol used to amplify messenger RNA from small numbers of cells.”
