

The Journal of Neuroscience

April 4, 2012 • Volume 32 Number 14 • www.jneurosci.org

Cover legend: A color-coded activity map and a raster plot obtained by fast confocal microscopy of an immature hippocampal slice stained with a calcium indicator. Analysis of the simultaneous behavior of multiple CA3 neurons during synchronous network bursts revealed a repeatable activation order from burst to burst. For more information, see the article by Takano et al. (pages 4743–4754).

5016 **Correction:** The article “Inner Hair Cells Are Not Required for Survival of Spiral Ganglion Neurons in the Adult Cochlea” by Yael Zilberstein, M. Charles Liberman, and Gabriel Corfas originally appeared on pages 405–410 of the January 11, 2012 issue. A correction to that article appears on page 5016.
