

# The Journal of Neuroscience

January 11, 2012 • Volume 32 Number 2 • www.jneurosci.org

**Cover legend:** Disrupted-in-schizophrenia 1 (DISC1, red), a risk factor for major psychiatric diseases, is expressed in cortical interneurons (green) during embryonic development, when these cells migrate over long distances to the cortex. Knockdown of DISC1 *in vitro* or *in vivo* leads to morphological changes in these neurons and impairs migration. For more information, see the article by Steinecke et al. in this issue (pages 738–745).
