Cover legend: Section of a dark-adapted striped bass retina. The novel protein CNG-modulin (red) is expressed in cone photoreceptors, as revealed by a specific antibody. CNG-modulin regulates ligand sensitivity of the cyclic GMP-gated ion channels in cone outer segment plasma membrane. Photograph by Dr. Nomingel Tserentsoodol of Duke Eye Center Imaging. For more information, see the article by Rebrik et al. (pages 3142–3153).
