

The Journal of Neuroscience

March 20, 2013 • Volume 33 Number 12 • www.jneurosci.org

Cover legend: Rendition of neural progenitors in the embryonic mouse neocortical germinal zones at E15.5, 24 h after *in utero* electroporation with pTbr2-Cre × pCAG-Stoplight plasmids. Radial glial cells, short neural precursors, and basal intermediate progenitor cells are visible following transfection. For more information, see the article by Tyler and Haydar in this issue (pages 5106–5119).
