**Cover legend:** Hes1CreERT2 can be used to drive recombination in many different progenitor and stem cell populations during development. This image shows a coronal section of an embryonic day 15.5 (E15.5) mouse head in which tdTomato was used as a recombination reporter and tamoxifen administration occurred at E11.5. For more information, see Gordon et al. (pages 12197–12207).
