April 30, 2014 • Volume 34 Number 18 • www.jneurosci.org

Cover legend: High-magnification confocal image showing the fine structure of a perineuronal net (green) surrounding a neuron. Perineuronal nets are a special type of extracellular matrix with high content in hyaluronan and associated primarily with interneurons. Anti-vesicular glutamate transporter-1 (red) and anti-vesicular inhibitory amino acid transporter (blue) antibodies were used to detect excitatory and inhibitory synapses, respectively. For related information, see the article by Arranz et al. (pages 6164–6176).

6422 Correction: The article “Chronic Alcohol Disrupts Dopamine Receptor Activity and the Cognitive Function of the Medial Prefrontal Cortex” by Heather Trantham-Davidson, Elizabeth J. Burnett, Justin T. Gass, Marcelo F. Lopez, Patrick J. Mulholland, Samuel W. Centanni, Stan B. Floresco, and L. Judson Chandler appeared on pages 3706–3718 of the March 5, 2014 issue. A correction for that article appears on pages 6422.
