

The Journal of Neuroscience

August 13, 2014 • Volume 34 Number 33 • www.jneurosci.org

Cover legend: NMDA spike/plateau potentials can be elicited locally in distal dendrites of thalamocortical neurons (two-photon reconstruction, color encodes depth) in dorsal lateral geniculate nucleus. Through these dendritic potentials, cortical feedback can regulate the flow of visual information by shifting the functional firing mode of thalamocortical neurons from burst to tonic and by facilitating retinal signal transmission in tonic mode. For more information, see the article by Augustinaite et al. (pages 10892–10905).

11173 **Correction:** The article “Stimulated Emission Depletion (STED) Microscopy Reveals Nanoscale Defects in the Developmental Trajectory of Dendritic Spine Morphogenesis in a Mouse Model of Fragile X Syndrome” by Lasani S. Wijetunge, Julie Angibaud, Andreas Frick, Peter C. Kind, and U. Valentin Nägerl appeared on pages 6405–6412 of the April 30, 2014 issue. A correction for that article appears on page 11173.

Persons interested in becoming members of the Society for Neuroscience should contact the Membership Department, Society for Neuroscience, 1121 14th St., NW, Suite 1010, Washington, DC 20005, phone 202-962-4000.

Instructions for Authors are available at <http://www.jneurosci.org/misc/itoa.shtml>. Authors should refer to these Instructions online for recent changes that are made periodically.

Brief Communications Instructions for Authors are available via Internet (http://www.jneurosci.org/misc/ifa_bc.shtml).

Submissions should be submitted online using the following url: <http://jneurosci.msubmit.net>. Please contact the Central Office, via phone, fax, or e-mail with any questions. Our contact information is as follows: phone, 202-962-4000; fax, 202-962-4945; e-mail, jn@sfn.org.
