## Addendum: Rice et al., Low-Level Image Properties of Visual Objects Predict Patterns of Neural Response across Category-Selective Regions of the Ventral Visual Pathway

In the article “Low-Level Image Properties of Visual Objects Predict Patterns of Neural Response across Category-Selective Regions of the Ventral Visual Pathway” by Grace E. Rice, David M. Watson, Tom Hartley, and Timothy J. Andrews, which appeared on pages 8837–8844 of the June 25, 2014 issue, we state in the Materials and Methods section that “the significance of the correlation was assessed by determining the reliability of the  $r$  value across all subjects.” To do this, we calculated the correlation for each participant. The significance of these correlations was then tested against the null-hypothesis (zero) using a one-sample  $t$  test. However, we did not provide the  $t$  values or mean individual level correlation values. The values for all the significant correlations can now be found in the following Table 1.

**Table 1.**

	Mask	Analysis	Group correlation	Sample	$t$ value	$p$ value	Individual correlation
Expt 1	Ventral	All	0.79	20	24.23	$p < 0.001$	0.72
Expt 1	Ventral	Between	0.53	20	9.28	$p < 0.001$	0.46
