

The Journal of Neuroscience

October 1, 2014 • Volume 34 Number 40 • www.jneurosci.org

Cover legend: Functional activity in the dentate gyrus/CA3 subregion of the human posterior hippocampus in coronal (top right), sagittal (bottom right), and axial (left) planes. A study using high-resolution functional MRI found evidence that this subregion is responsive to different aspects of recognition memory along the hippocampal longitudinal axis. Furthermore, these different patterns of activity in the anterior and posterior portions of the dentate gyrus/CA3 subregion were correlated with different behavioral conditions of recognition. See the article by Reagh et al. (pages 13301–13313) for details.
