October 15, 2014 • Volume 34 Number 42 • www.jneurosci.org

**Cover legend:** A mouse neuromuscular junction (NMJ) showing acetylcholine receptors (red), motor nerve (green), and nuclei (blue). These peripheral synapses are normally remarkably stable in adult animals, but they undergo dramatic changes in myasthenic disorders or aging. For more details, see the article by Barik et al. (pages 13892–13905).
