May 13, 2015 • Volume 35 Number 19 • www.jneurosci.org

**Cover legend:** This image shows the brain and ventral nerve cord of the fly *Drosophila*. The regions of synaptic contacts (neuropil) are labeled with antibodies against synapsin (green) and the cell bodies are labeled with propidium iodide (magenta). Loss of synapsin decreases memory strength for learned odor avoidance and learned odor approach. For more information, see the article by Niewalda et al. (pages 7487–7502).
